## General Motors - Fuel System Identification Guide

On some General Motors light trucks the fuel system option code (RPO) must be determined in order to identify the proper part number required for service. The Fuel System Option Code can be found on the Service Parts Identification sticker.

This sticker is normally located inside the glove box door on light duty trucks and either inside of the glove box door or inside of hood on vans.

You will find a 3 characters code (numbers or letters). This information is necessary to obtain the correct assembly.
